

MACHINES FOR
BATTERY PRODUCTION AND SPECIALISED
MECHANICAL ENGINEERING

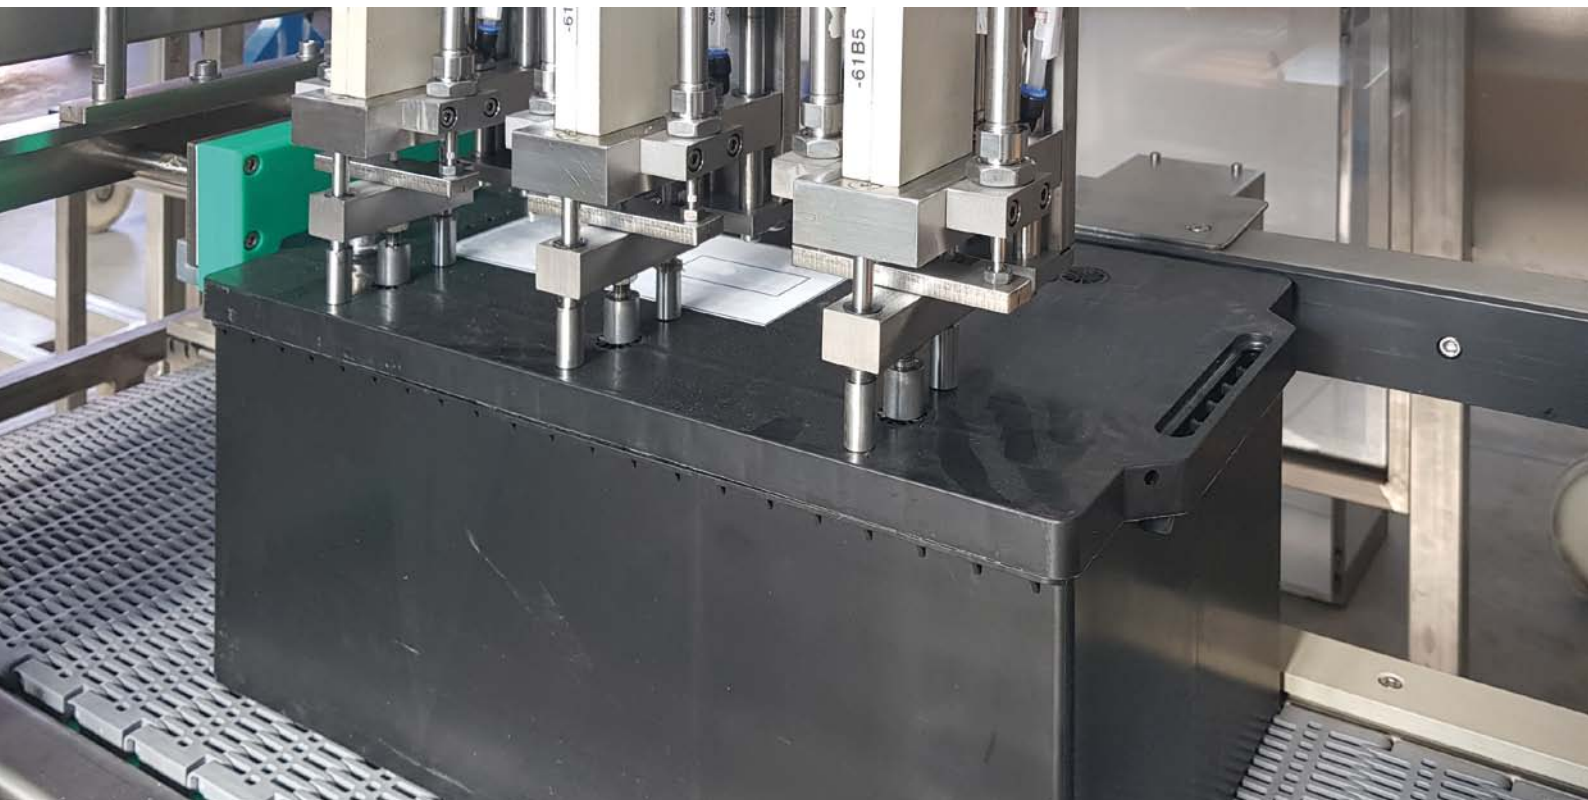

Higher Quality. More Transparency.

Fully automatic plug height testing

In the sector of quality assurance we guarantee that our systems produce batteries of continuously high quality without exception by using comprehensive quality controls and documentation processes. Our new fully automatic plug height test carries out controls quickly and replicably.

The measurement system can be supplied as a 'stand-alone system' or as an extension to our plug setting machine.

Your benefit:

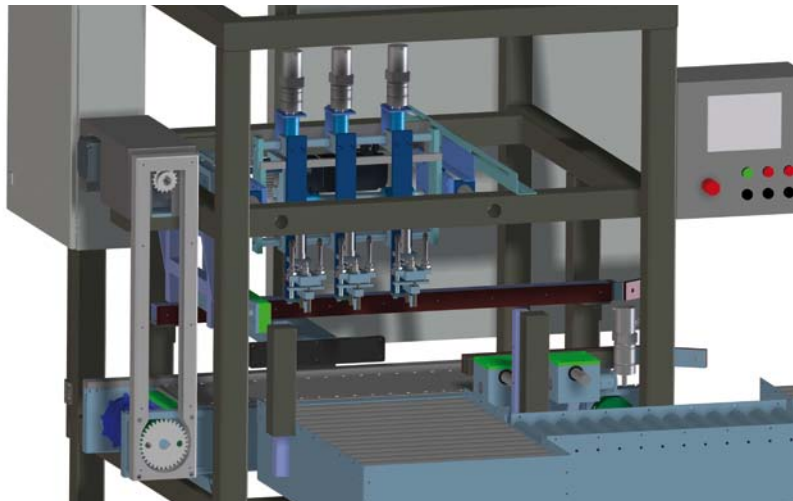

- + **Storing the measurement data** for traceability
- + **Fully automatic conversion** to other battery types and / or stopper types / no set-up time required
- + **Optional extension** for the proven ACCUMATION plug setting machine

MACHINES FOR
BATTERY PRODUCTION AND SPECIALISED
MECHANICAL ENGINEERING

Optional:

In order to be able to trace which battery was supplied with which production data the measurement system can be expanded with an optional scanner. This scans the code on the battery.

Measurement probes are used to test the plug height in relation to the surface of the lid.

EVERYTHING FROM A SINGLE SOURCE

Thanks to our integration into the **PÜTZ GROUP** and the resulting **synergy effects** we are able to offer you not only battery production machines but also the appropriate testing technology to test surfaces, for dimensional accuracy and completeness.

Good reasons for ACCUMATION ...

... we take your production on the road to success because we have the technology you need.

**We look forward
to hearing from you!**
