

Automatic format adjustment for new and existing production lines

Faster product changeovers. Less manual intervention. Fewer setup errors.

The challenge:

At a customer's existing production line, frequent product changeovers required operators to manually adjust the positioning axes several times a day. Although the product-specific target positions were already stored in the HMI, the adjustments still had to be made manually, requiring considerable time and effort.

This needed to change: The customer was looking for a cost-effective, easy-to-retrofit solution that would automate format changeovers while requiring minimal modifications to the existing equipment.

Our solution:

The existing production line was upgraded with automatic format adjustment at a manageable cost and with minimal effort.

The positioning axes now automatically move to the stored target positions.

This makes format changeovers significantly easier for operators and ensures repeatable settings.

Our services at a glance:

- ✓ Analysis of the existing manual adjustment axes
- ✓ Selection of a cost-effective, easy-to-retrofit drive solution
- ✓ Mechanical retrofitting of the existing adjustment mechanisms
- ✓ Integration of the actuators into the existing control system
- ✓ Reuse of existing product-specific position settings
- ✓ Automatic positioning of the axes to their target positions during product changeovers
- ✓ Modification of the PLC and HMI software
- ✓ Commissioning and optimization of the existing production line

Our new ticket system for support requests

Our new ticket system for support requests is now available – especially for urgent matters such as machine downtime or technical malfunctions.

Your request will be recorded in a structured format and forwarded directly to the appropriate specialist team. This allows us to process requests more quickly, ensure transparent workflows, and reduce response times.
